

VizItCards – Web Evolution

Your goal today is to design a user interface for tracking the evolution of a website. There are many questions one could ask about how a website's content, structure, and/or usage have changed over time. *You will not address all of these in your visualization.* We do, however, expect you to focus on changes in behavior (not just a short snapshot). **So please don't redesign Google analytics' Sankey diagram (which visualizes flow in a given time period, but not how flow has changed over time).**

Dataset (Feel free to add your own, e.g., links between pages, etc.):

Client Related	IP
	User-identifier
	User preference settings
	Browser used
Access	Entering Time
	Leaving Time
	Time taken to serve this request
	Previous Visited Page (page linked to this URL)
	Page navigated to after leaving this page
Content	Content/text requested by the user
	Size of the response to the client (in bytes)
	Content of the website
	Status code sent from the server (200, 404, etc.)
